Math AutoCAD supports a number of application programming interfaces (APIs) for automation. These include.NET, Visual LISP, Visual Basic for Applications (VBA) and Visual Lisp (VLS). AutoCAD supports the use of two math automation applications for mathematical computation: MathScript, developed by West Design Solutions and written in AutoLISP, is an advanced programming language. The language is used to perform arithmetic operations such as addition, subtraction, multiplication, division and other mathematical computations. MathPrefix, developed by West Design Solutions and written in AutoLISP, is an AutoLISP based math calculation system, which is comparable to Excel's formulas. MathPrefix supports calculation of unit operations such as volume and area calculations. It also supports functions that are normally done in AutoCAD, such as the trigonometric functions and the exponential and logarithmic functions. A number of AutoCAD add-ons include their own math libraries, which are used for mathematical calculations in the products. These include: BuildATX(and also: BuildArtX, BuildArchX, BuildBldgX, BuildClsX, BuildCncX, BuildDraX, BuildElectX, BuildEngX, BuildEngFx, BuildFlx, BuildFrameX, BuildGrpX, BuildHdlX, BuildHdlsX, BuildNacX, BuildPlanX, BuildPlnX, BuildPlyX, BuildProcX, BuildRptX, BuildScnX, BuildStruX, BuildTrnX, BuildWndX) BuildEZDxf, by Brozdu, is a robust 2D DXF reader and converter that allows DWG and DWF files to be loaded and rendered directly into a 2D layout. It also includes features such as support for basic layouts and labels, editable paper sizes and import/export of design data. BuildHdrX, by CADN, is a user-
