Ed Edd n Eddy Mis Edventures Pc DownloadlQ: getting a View with a certain class depending on the value in the Tag class If I have a view in the document class, what I want to do is to pass in a variable called the tag, which contains the class of the view that I want the view to have, then depending on the value in that class I want to do certain things. I hope this makes sense. If I can do this I would save a lot of time during development of the project as I would just need to change the tag variable. A: Simply use Class cls = Class.forName("package.className"); and its construction like new cls(arguments); in order to set the'super' arguments. In your case: Class cls = Class.forName("view.myView"); cls.newInstance(arguments); Q: 'Function Expression' type is not assignable to type 'Symbol' How to change data type of function parameter in typescript.
