Untitled.WinReACTor TorrentÂ .This invention
relates to a coating composition for use on painted
substrates, especially the provision of a curable
coating, preferably a two-component urethane

coating, for use on automobiles. Prior art urethane coatings tend to be deficient due to deficiencies in the curing systems used for such coatings. For example, solvent borne coating systems are known to have problems with paint adhesion. These coatings also frequently contain volatile organic solvents which lead to environmental problems when the coated articles are discarded. It is an object of the present invention to provide a two-component curable urethane coating which can be applied to a substrate by spraying and which has low volatile organic solvent content, low VOC content and good wet adhesion characteristics. It is a further object of this invention to provide a coating system which has high chemical resistance and which can be applied in spray booths. It is a further object to provide a coating composition which has low VOC

content and low polluting potential and can be applied to a substrate by spraying in a closed system. These and other objects will be apparent from the following description of the invention. The present invention relates to a coating composition which comprises a first component comprising a compound having the general formula (I): wherein R1 is a C2-C12 alkyl group, an aryl group, a hydrogen atom or a carboxylic acid or salt thereof, an alkyl moiety of a C1-C12 alkyl group, an aryl moiety of a C6-C12 aryl group, and at least one of R1 is carboxylic acid or salt thereof; R2 is a C3-C12 alkyl group, an aryl group, or an aralkyl group; and at least one of R2 is carboxylic acid or salt thereof; wherein the molecule contains at least two asymmetrical carbon atoms; and a second component comprising a liquid polyisocyanate. In a

further aspect, the present invention relates to a

Credentials Storage for SSO login I am
implementing SSO login and authentication for my
AngularJS app. In the app, I have one static and one

dynamic part. The static part contains static JS files and the dynamic part has just HTML and AngularJS files. I've managed to get authentication to work but

I'm having a very hard time storing the login credentials in the client. I am using the "localStorage" JS API to store the user credential in the client. I'm running into some problems. For some reason the credentials are not stored in the localStorage. I verified this by running the app with the javascript console open. The credentials are neither stored nor retrieved. To retrieve the user credential from the client, I use the code below:

```
app.config(function($httpProvider) {
  $httpProvider.interceptors.push(function($q,
    $window) { return { 'request': function() {
    console.log("Inside request interceptor"); return
    $q.when(true); }, 'response': function(response) {
```

```
console.log("Inside response interceptor"); if  
(response.data) { $window.localStorage.setItem('3e33713323
```
