Q: How do I generate secure tokens for mobile clients I am generating tokens for my mobile client (Android/iOS), for purposes of offline login. My understanding is that their might be a problem for the token's to be generated the server side where I have control on the data and am generating them on the server side then forwarding them to the client. I have read about the token in the form of HMAC of ID's concatenated together. My concern is that I will have to store a list of all the IDs in my app and generate tokens for all the IDs that I support. So my question is: How is this approach safe? Is there a better way of generating tokens for mobile clients? A: I agree with the other answers, that it's not a good idea to do it on the server. You should generate the token on the server, then pass the token to the client and validate it. If the token is correct then you have a secure tunnel from the client to the server. There is no mention of whether the id's are "random" in the question, and you should be able to generate a token of any size as long as the server has the list of IDs which it is valid for. How you generate the token depends on how your client wants to store the tokens it has. If the token is large, you can use HMAC, which allows you to compute a hash of the id's concatenated with a secret. A: To add to what @Sean said, you should not have the IDs "stored" in your Android app. If the user login is secure, then the login information itself should be stored in the user's browser. If the user login is via the mobile app, then the login data is stored on the server and sent to the app via a secure API. If the user login is via the website, then the login information is sent to the browser and the browser should store the login information. If the login information is stored in the mobile device, then all the security issues with a mobile app in addition to the passwords and security issues with storing database information on a mobile device. A: If we are talking about "generate a secure token for offline login" then I would suggest using a Web Crypto Library, like crypto.js. This is how I generate tokens for my mobile clients. Q: Why didn't Sook get her magical powers back? In GoF (not sure about the exact chapter), Sook finds out that she is probably fathered by the witch. She confronts the witch and tries to kill her. The witch is frail. Sook, a vampire, then tries to kill her. In the process, she breaks a few of the witch's bones and her legs. She is successful, and almost kills the witch. The witch begins to expunge herself of magic, and Sook enters her body to rule the land. Instead, she gets her power back. Why did the witch have to expunge her magic? Does she not have a bodily disintegration spell? A: This is one of the few occasions where GoF shows exactly how this works. Note that this is from the perspective of someone watching this from outside the scene. (Spoilers) When Sookie is on the table, removing her power with the spell, something goes wrong. Sookie is suddenly taken into the body. The reader is expecting her to leave the witches body and return to her own (the way of things in GoF), but she does not. Instead, she enters a "world of herself". Her body lies on a table. The witch begins to form a spell, which takes over her. The witch materializes a bottle of some kind. Sookie fills up the bottle with blood. Sookie throws the bottle into the air. This is, of course, a spell. The bottle travels through the air and lands somewhere else. We already know that it is not the witch's body. The potion inside the bottle has a very specific effect - it immediately transforms the potion's holder into the thing inside the bottle. Although we cannot see it, it is this, of course, that gives Sookie back her own body (as she entered an entirely different person's body). We then see her from the outside, as a different person, before being allowed back into her own body. Sookie wakes up, and we immediately see that she has some strange powers - something about which she is highly confused. GoF assumes that she is, in fact, back in her own body - just how she was before the spell. This is probably the version of the scene that was the inspiration for the vampire world - you
