★★★★★ WANTED: Android, iOS & Desktop Application Developers. ★★★★★ Hello Developers! This is an application designed by me to help the user better understand why neural networks are so powerful. This is the easiest to use and the most intuitive application on the market for understanding neural networks. It shows the user (properly speaking, the user's brain) a neural network (based on 2 neurons with a weighted link, since you won't know what the hell I'm talking about without a visual, so I'll make it easy for you), with several interactive elements: 1. The input box allows you to choose the number of neurons in the network and the number of inputs. 2. The output box allows the user to view the predicted output and the actual output. 3. The "try again" button allows you to try again or leave the current weights displayed. 4. The "plot the entire network" button allows the user to plot the entire network. 5. The "reset weights" button allows the user to reset the weights displayed. 6. The "add neuron" button allows the user to add a neuron to the network. 7. The "add input" button allows the user to add an input to the network. 8. The "print weights" button allows the user to print the current weights displayed. 9. The "clear weights" button allows the user to clear the current weights displayed. Note: The APK is free for the next few days while I test and fix a couple of bugs. In the next few days, I will release an update that has enough new features to be worth a fee. Please email me if you want early access to the paid version. I'm a single, white male. (well, not anymore) I live in Kansas, and have been programming since I was 8. That time was spent playing on the Windows platform, but I'm now focused on the Apple platform. I'm also a red blooded American
