Hsp90 is involved in the regulation of ERK-p90RSK signaling pathway in human renal cell carcinoma. Hsp90 is overexpressed in many types of cancers, such as renal cell carcinoma (RCC). However, its role in RCC is unknown. In this study, we investigated the role of Hsp90 in the regulation of extracellular signal-regulated kinase (ERK) phosphorylation and p90 ribosomal S6 kinase (RSK) activation in RCC cell lines. To elucidate the role of Hsp90 in RCC, human RCC cell lines, 786-O and OS-RC-2, were treated with an Hsp90 inhibitor, 17-AAG. The effects of the Hsp90 inhibitor on cell proliferation and phosphorylation of ERK and RSK were determined by 3-[4,5-dimethylthiazol-2-yl]-2,5-diphenyltetrazolium bromide (MTT) assay and Western blot analysis. Additionally, small interfering RNA was used to confirm the Hsp90 role in the regulation of ERK and RSK phosphorylation in RCC cells. Treatment with the Hsp90 inhibitor, 17-AAG, decreased the proliferation of 786-O and OS-RC-2 cells. In addition, treatment with 17-AAG decreased the phosphorylation of ERK and RSK in a dose-dependent manner in the 786-O cells. However, treatment with 17-AAG did
