Web Site Grabber-7 Download

Apache Web Server is an open-source web server software that is licensed under the terms of the Apache License 2.0. Web Site Grabber-8 is a small-sized software tool whose purpose is to grab links and various custom data from a user-input website and save all results to the hard drive. Surprise-free setup and cluttered interface On the one hand, the installation process is a piece of cake, as it does not offer to download any third-party products and it does not take longer than a few seconds. On the other hand, the interface you are greeted by presents a pretty convoluted design, as it struggles to cram a lot of information into one single window. As a consequence, novice users might encounter a few difficulties when trying to get around Web Site Grabber-8, yet some comprehensive Help contents are incorporated. Configurations you can set up As stated above, this program enables you to grab links and custom data from any specified website, by simply pasting the URL in the appropriate box. After a short amount of time, the main window is going to display all found pages for parsing and the results in two separate panels. In addition to that, you can also view the total number of pages detected and links returned, traffic and time it took to process everything. Results can be exported to a custom location using a TXT file extension, for safekeeping or for use at a later date, while projects can be saved using an INI format, so that you can continue processing it when you have more time on your hands. Bottom line In conclusion, Web Site Grabber-8 is a pretty efficient piece of software when it comes to retrieving specific information from particular websites. Although the interface could use some improvements, jobs are completed in fair amount of time without hanging, freezing or affecting the computer's performance in a significant manner.
