

Bit, byte, integer, word, long, single and string variables. Compiled programs work with any 8051 FPGA such as: AT89C1051, AT89C2051, AT89C4051 8031, 8032, 8051, ... The program includes a description of all the variables used in the program. By default, the program uses a 32-bit register, which can be either 32- or 64-bit. The register, in a 16-bit program, must be 32-bit. In a 32-bit program, the register must be 64-bit. In the Lisp language, variables can take on different values. Variables in a program can be: In C, variables can take on the following values: In C, variables can be:
