A water-soluble homopolysaccharide was isolated from the leaves of Cistanche deserticola using hydrolysis, ethanol extraction and ethanolic acid hydrolysis. Its chemical structure was characterized using acid, Smith, Fourier transform infrared (FT-IR) and nuclear magnetic resonance (NMR) spectroscopy. The in vitro antioxidant activities of the polysaccharide were estimated by scavenging hydroxyl and DPPH radicals and reducing superoxide anion and NO radical. In addition, its protective effects on mice were investigated using a carbon tetrachloride-induced hepatotoxicity model and oxygen-gl 3da54e8ca3
