Although the acronym AutoCAD was originally used to describe a broad family of products, including older AutoCAD LT and AutoCAD 2000 applications, the trademarked AutoCAD trademark is only used for the current version. The current version is also called AutoCAD 2020, but is also known as AutoCAD LT 2020 or AutoCAD LT 20. AutoCAD LT 2020, when referred to without the version number (as 2020), is the latest version of the flagship

AutoCAD LT software and is also called AutoCAD LT. LT 2020 is an enterprise-level CAD program for single and multi-user licensees. LT 2020 is a single-user application that runs on Microsoft Windows operating systems. LT 2020 is the successor of AutoCAD LT 2017 released in 2017. The AutoCAD trademark was acquired by Autodesk in 1998, and AutoCAD LT was released in the same year. AutoCAD LT is the first desktop commercial CAD application designed specifically for small and medium-sized businesses and is installed on more than 300 million PCs worldwide. The AutoCAD trademark was officially trademarked in September 2015, and AutoCAD LT became a trademarked product in July 2015. Autodesk dropped the AutoCAD LT version number, but never stopped referring to the product as AutoCAD LT

2020, unlike its predecessors, which were renamed AutoCAD 2000 and AutoCAD LT in 2000. History of AutoCAD AutoCAD traces its roots back to 1979, when Michael Tsay, a programmer at General Electric (GE), began developing a small personal drafting program he named DeskCAD. Tsay was working on the program at a time when many of the drawings his office used were largely done on punch cards. Tsay started working with GE's own microcomputer development team, the GE Research Lab, to develop DeskCAD. A drawing program written in BASIC for GE's GCOS operating system, DeskCAD was released in 1979 as the first commercially available microcomputer drawing program. It included very basic CAD features, including line and arc drawing, dimensions, dimension styling, grids, and annotations. Although not

marketed as a CAD program, DeskCAD eventually proved to be a successful program that won Tsay recognition at the 1980 National Inventors Convention, where it was nominated as “inventor of the year.” The program won the 1981 ACM Software System Award. The first

Q: Android Webview - JS Alert or Message Box I have a webview in an android app, and I need to show a message box to the user. Basically, I would like to show a message box in the middle of the webpage, if the user clicks on a button. I want to do this without using a custom webview. The code is something like this (although the alert has a id, not a style).

```
document.getElementById('id').style.visibility = 'visible'; //alert('XSS Alert');
```

Thanks. A: If you are using a WebView, you should use WebChromeClient instead. For example, you can use the

```
onJsAlert() callback to popup an alert:  
String message =  
getString(R.string.my_message);  
getWebView().setWebChromeClient(new  
WebChromeClient() { @Override public  
boolean onJsAlert(WebView view, String  
url, String message, String redirectUrl) {  
showToast(message); return false; } });  
getWebView().loadUrl("");
```

I was wondering if I could get a little help as I am working on this fanfiction story and I am having a little trouble to find a good name for my main character. I am a newbie to writing so this is quite a big problem for me. "When a girl isn't under your control, you can handle." She glares, but I don't flinch. Her lips curl as she spits the word out like it's a curse. "Get out." "Take care, baby." I say as I lift a hand to wave at her. "See you around." She runs out of the back door and I leave with a satisfied smirk on my

face. Before she left, I made a quick stop by the other girls' room. I just need to take a moment to piss and relieve my bladder. I think I'll go in the bathroom that belongs
