com is responsible for all the content on its servers.Q: Looping php conditional and echo using javascript I am trying to build a simple if else statement using php that echoes different div's depending on the outcome of the code. For example, I would like to be able to put a var in the if statement and have that become a variable on the php and if it is true, then it should echo the output. I have a very basic understanding of php, but can't quite figure out how to be able to do what I need. If you could keep your explanations to a simple level, I would greatly appreciate it. Thank you. A: Not
