**Q: Why am I not able to update the same data inside a RadGrid after update Postback? I am attempting to build a workflow with multiple steps in a List (Projects) that update the status of a user. I have three status (Approved, In Progress, and Rejected) and am looking to check the status and then update the button's image. So, as the user moves through the step list, the status of the user is changing and the step is completed with a final status of Approved. The problem I am having is that my data is not updating the images for each step. I am still seeing the image with "Not Approved" and on click I am getting the data from my base, not from the Grid. In the code below, I pass the Status1 through and I'm expecting to see a button with the image "Approved" then once it is approved I want to click the button and have it change to "Approved." But what is happening in my code is I see the button image with the "Not Approved" when I first click on it. Then when I click it, it takes me to the base code and I see that the status is null when the button should be set to "Approved." \*\***(CODE BELOW)**\*\*\*\*\* Hope I am asking the right question here. Looking for any help anyone has in trying to solve this. Thanks!**
