AutoCAD History Founded in 1969, Autodesk was originally known as Microplan, Inc. Then in 1974 Autodesk Inc., a subsidiary of Autodesk, Inc., was formed. In 1983, Autodesk changed its name to Autodesk, Inc. and in 1990, the company's software division changed its name to Autodesk Inc. In January 1992, Autodesk acquired The Center for Spatial Data Analysis (CSDA). CSDA, which focused on spatial analysis, geospatial information technology, and computing services was renamed to Autodesk CSDA. In March 2003, Autodesk Inc. acquired Parametrix Inc., and the Parametrix product PTC WebView was integrated into AutoCAD. The PTC WebView was the first web browser for the PostScript language. This was not considered a new feature, because all browsers used at the time already supported PostScript. After the acquisition, Autodesk released a new version of AutoCAD called Web-Designer 1.4, and this new product offered web-based 2-D and 3-D design and documentation tools. Also in

2003, Autodesk introduced the AutoCAD DS package, which was released with a new design engine that allowed it to run on Microsoft Windows computers. Today, Autodesk is headquartered in San Rafael, California, and it has more than 11,000 employees worldwide. Get up-to-date information about AutoCAD and AutoCAD LT on Autodesk's Autodesk Academy and Autodesk University pages. Key Features AutoCAD is the premiere 2-D drafting tool. The following is a list of the most important features in AutoCAD, sorted alphabetically. AutoCAD Basics AutoCAD can be used as a standalone application, or it can be accessed through the Internet and connected to other programs. The AutoCAD user interface is divided into four panes: • The Draw panel • The Home panel • The Tools panel • The status bar at the bottom of the screen The Draw panel displays the objects currently selected in the drawing. The object list on the left side of the screen is comprised of the active or selected objects. This is the same list that appears when you select an object with the mouse. The Home panel is used for navigating around the AutoCAD workspace. Select

Aptamers are short single-stranded oligonucleotides that can bind to a target molecule with high specificity and affinity. The aim of this study was to develop a highly specific RNA aptamer which could bind to bacterial cell wall components and aminoglycosides, and to provide new knowledge

to guide the clinical use of anti-bacterial RNA aptamers in RNA aptamer-based therapeutics. After five rounds of in vitro selection of RNA aptamers to aminoglycosides using the nitrocellulose filter-binding assay, two different types of RNA aptamers with different binding affinity and binding specificity were successfully obtained. The two types of RNA aptamers, named RNA-1 and RNA-2, were derived from the same sequence, and these RNA aptamers could bind to the bacterial cell wall components, teichoic acid and lipopolysaccharide (LPS), but not to the non-bacterial components, such as bovine serum albumin and transferrin. The binding of RNA-1 and RNA-2 to LPS was dependent on the presence of Ca^{2+} . RNA-1 and RNA-2 showed binding affinity to aminoglycosides with high specificity and affinity, and RNA-2 demonstrated binding affinity for gentamicin, tobramycin and netilmicin. The detailed binding data show that the binding sites of both RNA-1 and RNA-2 in LPS are associated with the glucosyl moiety. We believe that these newly developed aptamers will be useful in the future study of RNA aptamer-based therapeutics to inhibit bacterial infection.

It's been far from the best start to the NHL season for Edmonton. The Oilers have been blown out in three of their first four games and lost the season opener Tuesday to Minnesota 2-1. In this week's video, TSN Hockey Analyst Craig Button breaks down Edmonton's early struggles and speculates what the team needs to do to turn the season around. "It's a combination of young guys who have to step up," Button said. "I think they're learning and growing and growing together as a group, so I think that they're going to get better. "What they need is just a change of pace, they need to come home and play a more experienced team, a more talented team. We've seen them be very good with the inexperienced team. The second game of the year, it's the wrong game to try and play that game against Boston and New York. They need a change of pace, they need to come home and play the team that's in front of them and show what they're made of." The Oilers, however, have done well against the New York Islanders in their first two games, winning both games on the road. They'll face a familiar opponent on Thursday when they visit the Islanders. "We've been on the road a few times this year already," Button said. "They play the Islanders in New York. I think it's the place to start.
