What's New In Dll Orphans?

Dll Orphans is a very useful tool developed by BMC Software. It is used to eliminate orphaned DLL entries that are currently on your PC. When an application is uninstalled, DLL entries that are linked to it are automatically deleted, which means they are no longer used by the program, but they are

still in the system. This is a nasty problem because these types of objects are usually left behind and adversely affect your PC. For example, when a poorly implemented uninstaller program deletes files and links to their parents, it may remove DLL entries, which are still needed by Windows. There are ways to deal with orphaned entries and Dll Orphans is a good tool to use, in order to resolve this issue.
