Autodesk plans to release AutoCAD 2020 (version 2020.2) in the first quarter of 2020, and AutoCAD 2020 Extended Release (version 2020.2) in the first guarter of 2021. AutoCAD 2020 Extended Release, when it is finally released, will be considered an update and not a new release, and therefore will not include any new features but will instead focus on solving issues and upgrading existing features. A History of AutoCAD AutoCAD is the second major release in the history of the company, following AutoCAD 2017, which was released in April 2017. AutoCAD 2017 was the last major release of AutoCAD prior to 2015 and the release of AutoCAD LT. AutoCAD LT was originally a separate application produced by Microsoft and was first released in December 1993. It was a lowcost version of AutoCAD that could be licensed on low end computers (laptops, in particular), and was intended to be used by students and newbie engineers. AutoCAD LT was deprecated in June 2011, and then discontinued in August 2012. During its life cycle, it became one of the most-used CAD applications in the world. From the beginning, AutoCAD was designed and developed by the AutoCAD group at the Autodesk research and development lab in San Rafael, California. However, as the company grew, AutoCAD was developed at the company's headquarters in San Rafael and by a number of Autodesk "partners," including CadSoft, Digital Design, ESI, Ingenuity Systems, and others. Today, AutoCAD is created and developed by a single team at Autodesk: the AutoCAD Development Center (ADC) in San Rafael, California. The development of AutoCAD LT, Autodesk's first CAD program, was primarily at the Ingenuity Systems labs in San Jose, California. What is AutoCAD? The word "AutoCAD" is a portmanteau of "automated" and "drafting." AutoCAD refers to the software that allows a user to create drawings and plans. AutoCAD is used by engineers, architects, contractors, and other designers for creating drawings, and is one of the leading CAD programs in the world, used by over 75% of 2,000 largest U.S. firms. Small business automation As part of its move to offer cloud services, Autodesk has offered additional online services under a subscription basis since 2011. In October 2012 Autodesk unveiled the new subscription based cloud desktop which allows customers to access all features of AutoCAD as well as other products, such as AutoCAD LT, Fusion 360, and Inventor, remotely through the web browser. The service was released initially as a standalone subscription, but as of February 2015 Autodesk also offers a bundled subscription option which includes access to all the products listed above as well as 3D Warehouse, the Autodesk company blog and Autodesk 360 cloud storage. The cloud services are billed annually and include all releases of Autodesk software. Video tutorials In July 2014 Autodesk acquired the popular video series of workflows called "Architects On Demand", written and produced by architect Bill Gates' small team of programmers. Since 2010 Autodesk has produced hundreds of instructional videos free of charge for subscribers to its cloud service and Autodesk 360. History Autodesk was founded in 1982 by Gary Rockwood and Chuck Geschka, both former employees of the next-generation computer company Olivetti. Their first product was a program to make it easy to draw 3D wireframes for building models. It was called Microwriter. In 1986 a company called 'AutoCAD' was spun off from Autodesk, which was a computer-aided design product originally for microprocessors by the same name. The idea was to produce CAD for the Apple Macintosh, competing with other prominent companies such as Alias, Seesaw and

Solid Works. The first version of AutoCAD for Macintosh was released in 1990. In 1996 Autodesk introduced 'AutoCAD R14', a commercial version of AutoCAD for the Mac OS. In the same year the company released its first version of AutoCAD for Windows, a commercial version of AutoCAD for Windows that could also run on the PC platform. AutoCAD for Windows was more powerful than other products on the market at the time. This version of AutoCAD for Windows also included direct Microsoft Windows integration. In August 1998 Autodesk purchased GRAPHICS Design Software for \$232 million. This added the Line/Plane/Surface feature to its design software. This feature allowed for CAD products such as AutoCAD to be af5dca3d97
