View of the Francis' Residence, from what is now Francis Avenue and West Fifth Street. Gilt and white lettering on the double doors read the Francis. Its trees provide an evergreen setting for the spires of St. John's Cathedral. The two brick houses across the road behind the Francis are the Crook residence and P.C. Crook House; the next houses are the Bouligny House and the Old Smith College residence. (See "Local Business Items," page 11.) In this project, we examine the implications of recent findings in the epidemiology of diabetes and the risk of pancreatic cancer. There is evidence that: 1) the risk of pancreatic cancer is elevated among diabetic individuals; 2) insulin and insulin resistance are linked to diabetes and increased pancreatic cancer risk; 3) genetic variants of the IGF-1 receptor are associated with diabetes risk and the insulin related risks of endometrial cancer and breast cancer; 4) diabetes and diabetes treatments are related to risk of pancreatic cancer and there is a poor correlation of diabetes and glycosylated hemoglobin; 5) there is an association between familial risk of diabetes and the risk of pancreatic cancer suggesting

that genetic factors
