In prior versions of Photoshop, the color space of your image determined which copy you selected, and its displayed as a selected color. This version also brings a new video editor, which lets you add and manipulate video clips and adjust the length of your video. With this release, you can resize both the width and height of the video clip. You can also trim and crop the video clip, trim and fade the video, add and adjust an offset for the video, add and format subtitles, and adjust audio with the new audio editor. You can also add markers, titles, and credits to the end of your video.

It's been the longest, most thorough updating that we've seen in the program. The update brings an all-new Quick Fix panel, file tab, RAW management, layers panel, canvas layout panel, and more.
