As part of the efforts to increase accessibility, web functionality is making a come-back as several elements of the desktop Photoshop workflow are being reimagined natively for use in the browser. In addition, Adobe Sensei - the intelligent technology powering Photoshop's UI - comes to the browser and takes advantage of AI and machine learning to give curious Photoshop artists the opportunity use creative tools in the browser to explore possibilities and retain the quality of editable images. Elements, as always, remains an excellent and ideal starting point for anyone new to photo editing. In Elements, you can now introduce your colleagues to Photoshop for the first time through Share for Review. This new closed system enables you to create a secure link with a URL that opens the image in the browser, without leaving your editor. This means you can safely give your collaborators a peek at the image before sharing. As you open an image, or access it from another URL or from your own download, a new set of user interface components displays. A Site Footer and Notes section are available for annotations, then a single, clever button accesses your clipboard, so you can paste in changes, add graphics, or perform other actions on the image. In Photoshop, Photoshop and Lightroom, it's possible to have multiple effects applied to a single layer or blend mode. With a few clicks, you can have multiple effects - for example, changing the color, contrast, or saturation of a brush or layer - that can be used across multiple layers in the same image. In Elements, it's a little more difficult, but still possible.

The next feature update to Photoshop will focus on improving the workflow for people who use the new 2D features, such as the new photo adjustment tools. While the feature set for the web remains unchanged, new web-safe actions are coming in future releases. Photoshop has been getting a touch up in the way of features available to non-professional users. The latest edition of Photoshop includes a number of new image editing features such as improved select and masking tools, the new HDR feature and a variety of other improvements which can be found here:

So now you have cutting edge tools to do all the diverse work you want in a web browser natively, and it's free. The performance in the stable version is spot on. Photoshop itself has been out of the design loop for some time. Adobe finally got their photography game back in order with the PS5. They implemented object tracking, masking, and other techniques to remove the need for a lot of manual masking, which is one of the most time-consuming and tedious tasks when you're working in a design environment. While they are still improving the product with each update, the PS5 is a big step forward in the field. Ultimately, artists with high standards cannot remain stuck in the filters. Photo editing software helps to augment their vision and rein in their imagination. It can take you into the any image, but as rapidly as you click, it also allows you to leave the restraints behind with your camera.
