I wish it was built into other programs but I find it to be so useful that I forget that it isn't built in to other programs. Generally, this tool is a neutral resolution of art since it is also useful for any other photo-editing programs, such as the Camera Raw (developed by Alien Skin Software) are Photo Shop's alternative processing tool for raw files. Aperture (MacOS, Canon, Nikon) are the RAW editors for Mac, Windows, or Apple. After seeing the awesome growth Smoothie is getting, his mother becomes concerned. She knows he's the world's first smoothie artist. She decides to go to a supermarket and buy him a ticket. She asks the supermarket manager to put the ticket in Smoothie's smoothie! Inside the supermarket, Smoothie discovers that there is absolutely no resemblance between the real world and the supermarket. For example, he sees three kinds of smoothie: citrus smoothie, coconut smoothie, and strawberry smoothie. And then he sees smoothie artists sitting on floats, who are way better-looking than he is. The selections tool itself is now capable of comparing a selection to a database of images in order to produce a comprehensive never before seen selection. There are going to be possibilities to create a UV channel, which is going to allow highly detailed and textured meshes to be worked upon. In the new version, you can work with all the orders for your image, including analog, conventional, and satellite. It's also possible to create a new order by dividing your image in its own sections, which is going to help you create your own order. Neither elements for a project nor channels are going to be moved in this version, it actually means the new version doesn't show separate layers available in the 'Layers panel' on the top.
