In a move sure to fuel Photoshop fires, Adobe released a keynote speech from Adobe CEO Shantanu Narayen on Tuesday, October 11. In it he outlined the company's new direction, and hinted at future features. There are already rival products like GIMP and Pixlr which perfectly complement the Web, and work well on your mobile devices. For the likes of those wanting to do something truly different or having limited web access, Photoshop should be the right answer. When I first saw what that meant for my on-the-go lifestyle and published a photo essay on The Verge , many thought I was nuts. Therefore, it's very welcome news that Photoshop will accompany Google's upcoming Pixel smartphone, Pixel C tablet and Chromebook Pixel 2. I can expect to see many more "Photoshop on the Web" features. Then, we will appreciate the need to be able to either download them on to our devices, or have a web-based browser plug-in. The most compelling new feature will be A real focus on the web, rather than just having to stick to photo manipulation. We could all do with an editing web-based version of Photoshop, and being able to crop, resize, and quickly make corrections to images and videos on the go would be the icing on the cake. I'm excited to see Photoshop for the web available in browsers, so we can work on the go, synchronise across multiple devices and then make the image changes on the go.

The major new feature of Photoshop CC is Photoshop Brain. Brain is a powerful AI-powered toolkit that enables Photoshop and other Adobe Creative Cloud applications to automate their content creation. The neural network learns about the content and styles you create and then helps you out with smart updates that can create more amazing images and artwork with little or no effort. Introducing the Brain features hasn't been without its challenges. The first being the learning curve it requires. Some users have commented that it took them a while to get their results right. Some users even get an error in the dialog window titled Not all areas of this image can be edited. Not to worry though, we'll add the missing features in the next major release. While the Deep Learning

features of Photoshop are obviously limited to the GPU environment, there are of course a whole range of useful features that don't rely on GPU for processing but do work much better on the CPU. Examples of these include what Adobe calls the Intelligent Crop tool, which allows you to display a small selection on an image and then drag the handles to adjust. It then intelligently and automatically changes or selects the previous crop. You can also use the Bonsai Brush Tool to quickly create an abstract tree or pattern on those old desktop images. The Bonsai Brush Tool is a great time savour for trying new and different brushes. It looks like Photoshop on the web is here - and it's ready to come right into your browser, just like you often access online photo editing tools and services via tools like Google, Instagram, and Facebook. You'll be able to use Photoshop on the web in a unique way. Adopt, explore and learn a different way of using Photoshop - on the web will reshape how you work and develop in the future. Even if you currently only use online services to edit images, you might start to ask the question, "Do I need all of Photoshop in a desktop app?" and then start to consider what would be lost otherwise. You'll be able to use Photoshop on the web in a unique way. Adopt, explore and learn a different way of using Photoshop - on a web page in a new browser, and with a familiar workflow and workflow of your desktop application. Some of Photoshop's tools will work differently, of course, and the browser is just a way of accessing the same underlying data.

Photoshop has continued to evolve with the modern era, all the while providing the best options for making amazing images. Photoshop has also incorporated some of the latest technologies so you spend less time trying to understand and more time creating. There is a plethora of new features that were added in the latest release, and the list continues to grow. So, here's what's coming to Photoshop in 2020 and beyond: The popular Iridient Screen plugin has been upgraded with a new blender tool to create more complex depth effects and edit the entire iris of your subjects so they look as realistic as possible. You need no longer create complex, customized layers to add textures to your images. High Dynamic Range (HDR), has been under development since 2012 and has finally become available to most Adobe apps and Creative Cloud (CC) members. Just drag and drop a tile onto any image to explore HDR. We are now seeing native HDR in apps like Photoshop, InDesign, and Lightroom. With the contest of software that is claiming to replace Photoshop, Adobe is not still in the business of being afraid to compete with its own product. In an effort to revamp and change the graphic designing standards, Adobe launches a new feature: Adobe XD, an all-new app that is not just a photo editor. Here are some key features of Adobe XD: Whether it's the latest Trends, Graphics, Layout, or sound, Adobe XD offers a ton of design options. It's a native UI app in both Mac and Windows. You can create and edit your work in a single app, and that's one of the reasons you see more and more designers switching to it. Adobe XD also works with most graphic editing applications, to convert a vector image into a native UI app or vector image.
